

2011 PRODUCT CATALOG

Circle Organics is pleased to present our 2011 Spring Catalog. In this edition, you will find our featured products and several new additions to our product line. We are very proud of our new line of organic and sustainable products for home lawn and garden, green house and green roof, the professional grower and landscaper. We offer three basic types of products available: Granular, Liquid, and Powder Dispersible.

Circle Organics is committed to preserving our natural resources, of which water has always been considered the most important. But did you know that there is more biological life and activity in the first six inches of the earth's top soil than in all of the earth's oceans? That's right, soil may actually be the more important natural resource as the soil can determine what ends up in the water shed and our oceans. How we treat this natural resource is paramount to our success as conservationists and protectors of our most precious natural resources.

At Circle Organics, we believe in producing and distributing only the best, most effective, and "easy-to-use" organic and sustainable products available on the market today.

Call or email us today to inquire about any of the products in our line. We will answer your questions and provide the kind of technical support you come to expect from a leader in sustainable products.

2011 SPRING SEASON

Circle Organics LLC

L I F E S O U R C E F O R S O I L S

A Educational Approach

Circle Organics was formed to provide an educational approach to sustainable gardening, agriculture, horticulture, and landscaping.

Circle Organics represents a revolutionary line of 100% Organic soil amendments, conditioners, bio-fertilizers, and other sustainable, yet effective, products.

Our unique product line was developed over more than thirty years of research by a North Carolina arborist who has recently been recognized locally, nationally and internationally for his work and contributions to the 'green' industry and sustainable product development. The product line has been used and field tested with enormous success and overwhelming positive response in many applications. Successful applications have included commercial, residential, golf courses, roof top gardens, parks, and the athletic fields and common spaces of several notable colleges & universities. Circle Organics products have been applied in new installations and administered in the general maintenance and symptomatic healthcare treatments of trees, shrubs & turf areas. Typical results include rapid growth response and significant reduction in early losses of newly planted material, exceptional root growth of sod installations, and the fast and full recoveries of trees and turf in disease and stress scenarios. Research and independent validation has indicated we have a particularly unique position in the industry with the following differentiators:

- Our **core product line** is “100 % ORGANIC” - not partially or organically based, as is the case with a great many products currently available which purport to be “organic”.
- Our products have **the most extraordinarily diverse and effective blends of live microbial concentrations**.
- Ours is the most pure and consistent product available, **derived from high quality private sources**, including a plant based source of nitrogen, which is completely unique in the current marketplace.
- Our proprietary **Water Dispersible Technology™** reduces the harmful effects of run-off.
- We also represent **organic-based products** that provide a great alternative to, or transition product set for, wholly synthetic-based NPK programs. Gradually reduce chemical dependence and increase probiotic soil activity, over a reasonable period of time.

Call us today to find out more about our extensive product line. We can meet your needs or design a custom protocol for any scenario. **877-472-2725**

An “E3” Approach

A proactive approach to landscape or turf management, and modern agriculture practices, is based on increased understanding of natural biological eco-systems, and the availability of affordable high quality products designed and engineered to grow and maintain naturally healthy and vigorous plants, gardens, trees, and turf.

“The Good, The Bad, & The Ugly!” For years, protocols have employed the traditional **synthetic NPK model** to take advantage of “The Good” that it has to offer: Consistency ; Convenience ; Easy to Use. But that has led to **“The Bad”** as synthetic fertilizer and products are often **applied at excessive rates that do more damage to soil residing microbial populations and the organic matter** that sustains them. This **creates un-natural growth rates** leading to **poor plant health and disease resistance**. It also provides **excessive use of nitrogen**, which can **increase water use** in plants and turf-grass. With the **rising costs** of chemicals and synthetic compounds, this approach is soon to be very ugly!

The “Ugly” is also exacerbated by the fact that applied NPK synthetic fertilizer is mobile and relocates to surface water with erosion and runoff while remnants leach to ground water resources.

E3. In order to be truly successful, any horticultural or agriculture program should meet the **‘E3’ criteria:**

Effective, **E**nvironmentally Sustainable, & **E**conomical.

Is the Synthetic Fertilizer Model E3?

Effective ? – NO. It works against natural systems in the soil-plant relationship resulting in poor cell structure & shallow root development.

Environmentally Sustainable? – NO. Synthetic fertilizer has negative environmental impacts to soil biology & water resources .

Economical ? – NO. It requires constant inputs & rising costs.

Follow these 3 Principles to Achieve E3

1. **Use organic and low NPK soil fertility products that are consistent, stable, and affordable.**
2. **Practice the judicial use of organic resources and microbial inoculants** combined with the understanding and response to **natural biological cycles** results in **improved fertilizer efficiency; reduced plant disease risks, increased wear resistance, & improved water efficiency.**
3. **The use of products with patented Water Dispersible Technology™** and the lower solubility of organic resources reduces the harmful impacts on surface and ground water resources.

The E3 Results Are Impressive

- ◆ Reduced Loss Rates on New Installations (from 7% average to less than 1%)
- ◆ Reduced Mowing by 25%
- ◆ Reduced Fertility and other inputs by 30%
- ◆ Reduced H2O use by 20%*

May River Golf Club– “ . . .

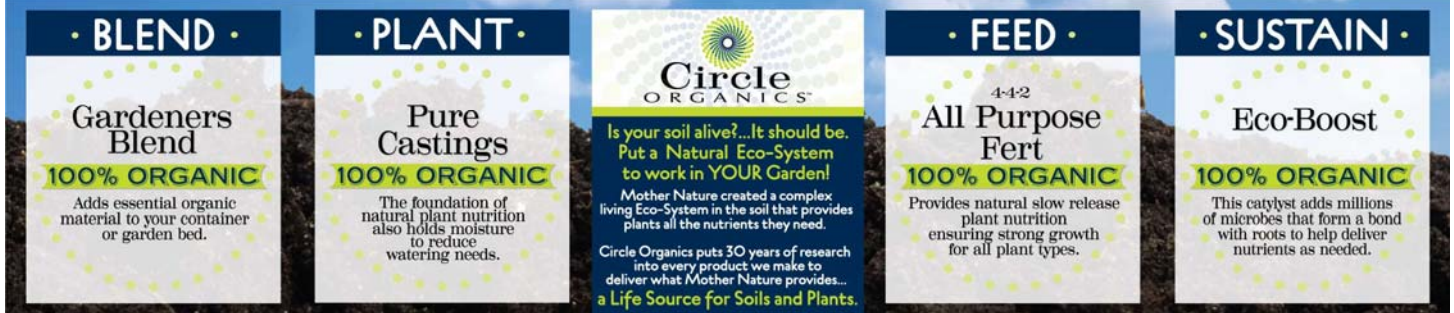

We ‘ve been able to decrease the frequency and quantity of our night time irrigation by 20%, saving us 150 to 180 thousand gallons every other night! All without sacrificing the health of the turf.”

1-877-472-2725 info@CircleOrganics.com

Create Your Own Sustainable Organic Garden

GARDEN BLEND™

Specifically blended for Vegetable Gardens, Annuals, & Perennials

- * Contains "Pure Worm Castings™"
- * Produced from Organic sources
- * Provides Natural Plant Nutrition
- * Reduces Watering Needs
- * Available in Qt. Bags and totes.

Garden Blend is an essential first step in preparing biologically active top-soil. Garden Blend™ is a ready to use blend for containers and garden preparation that includes the finest pure worm castings available. Our worm castings are the result of a scientifically developed diet of components known to promote naturally healthy soils and plants. This proprietary diet includes a special blend of minerals, nutrients, and living microscopic organisms. Our Blend retains moisture and holds water better than just plain potting soil. The result is a 100% organic, odor-less, weed free planting mix creating the ultimate organic growing medium!

PURE CASTINGS™

- Builds & Enriches Soil Structure
- Adds Essential Organic Matter to the Soil
- Promotes Natural Plant Nutrition
- Reduces Watering Needs

Worm castings are an essential first step in building a biologically active top-soil.

Circle Organics Pure Castings™ are the finest pure worm castings available. Our castings are the result of a scientifically developed diet of components known to promote naturally healthy soils and plants. This proprietary diet includes a special blend of minerals, nutrients, and living microscopic organisms. Pure Castings™ are a 100% organic, odor-less, weed free product which will turn your topsoil into the ultimate organic growing medium. Available in 5lb, 20lb, & 2000 pound totes.

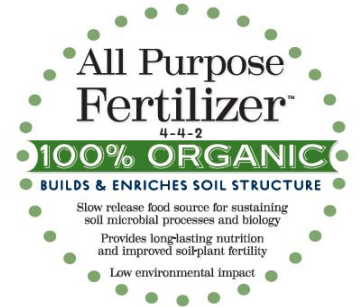

SPECIALLY FEATURED PRODUCTS

4-4-2 ALL-PURPOSE FERT™

All Purpose Fertilizer (4-4-2) is a slow release organic fertilizer. All nitrogen is derived from safe organic sources without any fortification from synthetic sources. Nutrients are available through microbial activity. The slow release feature results in a low environmental impact on surface and ground water.

- ◆ Provides biological release of essential nutrients for plant health and low environmental impact
- ◆ Provides food source for sustaining soil microbial processes and biology
- ◆ Provides long-lasting nutrition and improved soil-plant fertility

****Recommended companion product with Eco-Boost™ Soil Inoculant. Available in 5lb. Bags.**

All Purpose Fertilizer
For Lawn & Garden
5 POUNDS

SAFE FOR FAMILY, PETS AND THE ENVIRONMENT
www.circleorganics.com

Eco-Boost™

- Increases Drought, Disease & Pest Resistance
- Concentrated Liquid Root Drench
- Develops naturally thicker roots & stronger plants
- Reduces Fertilizer Needs

Eco-Boost™ provides the biological components necessary for healthy soils and plants. Healthy soil eco-systems are alive with microbial colonies which populate the root-zone and help plants acquire nutrients and fight disease.

Eco-Boost™ is a highly concentrated liquid derived from Pure Castings and include 13 varieties of Endo/Ecto Mycorrhizae, a complex and diverse blend of LIVING beneficial microbes comprised of more than 40 varieties totaling more than 13.89 Million CFUs (colony forming units) PER OUNCE; Also includes Liquid Humates, a protein base, humic acid, amino acid, yucca, and the finest North American Sea Kelp. Eco-Boost™ is a remarkable product which will bring life to your soil and healthy growth to your plants. Put an Eco-System to work in your lawn & garden!

Available in 1 qt.; 1 gal, 2.5 gal. & 5 gal. sold per gal 30gal drums and up

Directions for Use: Spray- foliage and soil surface around plants. Lawns & shrubs after each cutting. Mix 4 oz. Eco-Boost® to 1 gallon of water. **Special Applications** - Dip roots of all transplants before planting. Paint large cut areas to inoculate. Apply to compost to increase microbial activity. Use straight or mix 8 oz. of Eco-Boost® to 1 gallon of water (1:0 to 1:15 ratio) See package instructions for more information.

FERTILITY PRODUCTS

NUTRI-CAST®

40 lb. Bags / 2000 lb. Totes

Nutri-Cast® can do some pretty remarkable things in the soil.

For instance:

It regulates the availability of essential plant nutrients

It enhances the activity of fertilizers

It's teeming with beneficial microbes, enzymes and humic acid

It provides an organic energy source for beneficial soil microbes

It can stimulate root system development. Plants need strong root systems to take advantage of soil nutrients

Nutri-Cast® stimulates and supplements soil biology. Plants rely on the beneficial organisms in the soil to extract water and nutrients and defend themselves from disease-causing organisms. Nutri-Cast® improves soil quality by bringing dead soils back to life Nutri-Cast® has a huge variety of applications, from turf grass to plant installations

A picture is worth a thousand words:

The yard on the right was treated with Nutri-Cast® when sod was applied. The yard on the left was not. Plants can only be as healthy as the soil they grow in

FERTILITY PRODUCTS

BLACK CASTINGS™ are an all-natural fertilizer and soil conditioner produced by earthworms. Black Castings™ are all natural: they are not produced with animal, yard, or food waste. Children and pets can use the application area as soon as application is finished.

Professionals use **Black Castings™** for their lawns, gardens and nurseries, agriculture and turf, and orchards and vineyards.

Black Castings™: Are 100% organic

- ◆ Are produced by earthworms fed a high-quality diet
- ◆ Add organic matter to the soil
- ◆ Improve soil structure
- ◆ Are not produced with yard waste
- ◆ Are not made with horse, cow, or any other grazing animal manure

- ◆ Are free of *E. coli* and *Salmonella*, making them safe to handle
- ◆ Will not burn plants or trees
- ◆ Are nitrogen-free
- ◆ Break down slowly, reducing the need for repeated applications, making **Black Castings™** very cost-effective
- ◆ Available in 5, 20, 40# bags; totes up to 2000#

Black Castings™

Orchards & Vineyards

Agriculture & Turf

Lawns, Gardens & Nurseries

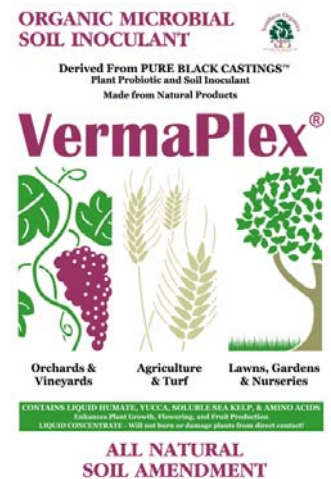

VERMAPLEX® is a 100% organic liquid extract rich in beneficial microbes and soil nutrients. VermaPlex® can... ..restore biological life to soil. Soil is a living thing, and plants depend on this biological life to help them extract nutrients and combat disease. Plants do not grow in a vacuum, which is to say that living soil is absolutely essential to their health and survival.

...help the soil regulate itself. In nature, soil chemistry is self-regulating: microbes in the soil consume organic matter, inorganic matter, water, and other nutrients, and regulate their levels as needed. ...feed plants without burning them. VermaPlex® does not supply pure nitrogen, but instead increases the soil's ability to absorb nitrogen from the atmosphere, leading to greening without the risk of burning. For this same reason, VermaPlex® can also reduce dependence on traditional fertilizers, which can burn plants and pollute the environment.

VermaPlex® is 100% organic and all-natural. It will not leach or contaminate the water table. It is also totally non-toxic, so adults, children, and pets can safely use treated areas immediately!

Available in 1 qt., 1 gal., 2.5 gal., 5 gal bottles; drums sold per gal 30gal and up

FERTILITY PRODUCTS

MYCORRHIZAL TABLETS 17-9-5

100 tablet containers ; 1000 tablet buckets;

7500 tablet buckets

Mychorrhizal Tablets 25-12-7

Plants need more than just healthy root systems in order to

thrive. They also depend on mycorrhizae, fungi that colonize their root systems and live symbiotically with them. Mycorrhizae help break down organic matter into nutrients, regulate soil chemistry, prevent water loss, and protect plants from disease-causing microbes. However, in many soils (especially compacted urban soils and heavily-managed soils); mycorrhizal populations are dead or unhealthy, leading to unhealthy plants that are highly susceptible to drought stress, nutrient deficiencies, and disease. Young and newly-transplanted plants, too, are vulnerable to these problems, as well as a dangerous condition called transplant shock. It is vital that these young and transplanted plants establish healthy mycorrhizal populations early on.

HYDROLYZED FISH is a 100% organic fertilizer made from fish extracts. It's an excellent source of nitrogen, manganese, potash, and essential trace elements.

More importantly, *it feeds soil microbes!*

Hydrolyzed Fish

Without microbes, plants could not survive. They depend on symbiotic beneficial microbes to help them break down organic matter into usable food, help regulate the flow of water, oxygen, and nutrients, and to protect the soil from disease-causing pathogens. **Hydrolyzed Fish** feeds these microbes, stimulating their growth and increasing their population, making the soil healthier and more fertile.

Hydrolyzed Fish:

- ◆ Is potent and long-lasting, and since this means it doesn't need to be applied as often as many fertilizers, it is also very cost-effective.
- ◆ Is certified 100% organic **Hydrolyzed Fish** is derived from all-natural fish tankage
- ◆ Is a great organic nitrogen source.
- ◆ Adds magnesium, potash, carbohydrates, enzymes, and vital trace elements to the soil to improve plant health and vitality.
- ◆ Is compatible with most liquid nutrients, fertilizers, pesticides, fungicides, and defoliants.

<p>Hydrolyzed Fish 1 qt Hydrolyzed Fish 1 gal Hydrolyzed Fish 2.5 gal Hydrolyzed Fish 5 gal</p>

FERTILITY PRODUCTS

MICRO-BAC™

Healthy soil contains beneficial microbes (bacteria, mycorrhizae, and fungi), which help plants break down organic matter, regulate nutrient and water flow, and protect plants from soil borne diseases. **Micro-Bac** is teeming with a diverse population of beneficial microbes, and after application, these microbes colonize the soil and plant roots, making plants healthier and stronger, and making the soil better able to absorb water and transport nutrients over the long-term. Chemical fertilizers have very short-term effects—using them is like eating candy: the effects are rapid and very noticeable, but unhealthy in the long-term—while **Micro-Bac** is very long-lasting—it’s more like eating whole-grain bread: it lasts a long time and promotes better health. In addition to the beneficial microbes, **Micro-Bac** also contains humic and fulvic acids, which promote root growth and the formation of new root hairs. So while the bacteria, fungi, and mycorrhizae are colonizing the roots and helping them take up nutrients, the roots themselves are getting healthier, giving **Micro-Bac** double the impact.

- ◆ Is 100% organic and is full of beneficial bacteria, fungi, and mycorrhizae to improve soil health.
- ◆ Contains fulvic and humic acids to improve soil structure and promote healthy root growth.

Available in 3 Sizes:

- Micro Bac 1 gal
- Micro Bac 2.5 gal
- Micro Bac 5 gal

LIQUID HUMATE PLUS™

Plants do not simply suck nutrients out of the soil. Just like human beings, plants need help to digest and absorb their nutrients. In people, the help is supplied by intestinal flora; in plants, beneficial soil microbes break down soil nutrients and make them available to plants.

Liquid Humate Plus™ feeds these microbes, increasing their populations and thus, the fertility of the soil. But plants cannot absorb broken-down nutrients without healthy root systems. That’s why **Liquid Humate Plus™** also contains naturally-occurring rooting hormones to increase root mass and root length, allowing plants to absorb nutrients more efficiently. **Available in 1 qt., 1 gal., 2.5 gal., and 5 gal containers.**

Liquid Humate Plus

Liquid Humate Plus contains:

- ◆ Liquid humate
- ◆ Humic acid
- ◆ Liquid yucca extract
- ◆ Soluble sea kelp
- ◆ Beneficial microbes
- ◆ Composted organic poultry manure extract

Liquid Humate Plus:

- ◆ Feeds beneficial microbes, increasing soil fertility.
- ◆ Stimulates root growth, allowing more efficient nutrient uptake.
- ◆ Contains composted organic poultry manure extract, an organic nitrogen source.
- ◆ Contains a wetting agent (liquid yucca extract) to increase soil permeability, water-holding capacity, and nutrient uptake.
- ◆ Improves the health of the soil over the long-term, helping it regulate itself better.

The Titan

For when value is placed on organic matter but the highest rate of nitrogen is required - RELY ON "THE TITAN!" Like "Screamin' Green" you can expect a steady release from unique mixture of nitrogen sources.

20-1-5

**30% Slow Release Nitrogen
with 10% S, 2% Fe**

% Organic Matter	30% OM
Bag Coverage	for 10,000 sq. ft. use 5 lbs/1000 for 16,500 sq. ft. use 3 lbs/1000
Greens Grade	SGN 100
Medium Size	SGN 200

Screamin' Green

A truly amazing fertilizer containing organic matter essential for soil life and formulated with a dynamic array of nitrogen sources. Five nitrogen sources offer five measured releases for a broad spectrum delivery pattern and optimum root uptake.

16-2-3

**60% Slow Release Nitrogen
with 2% Ca, 3% S, 1% Fe**

% Organic Matter	40% OM
Bag Coverage	for 10,000 sq. ft. use 5 lbs/1000 for 16,500 sq. ft. use 3 lbs/1000
Medium Size	SGN 200

Big "K" Matters

Great for late spring on cool season grasses before summer stress conditions. A high-K winterizer with plenty of organic matter for warm season grasses. Minimize winter damage and suppress spring dead spot (SDS) with combined effects of organic compounds, ammonium sulfate and sulfate of potash.

7-2-12

**40% Slow Release Nitrogen
with 2% Ca, 5% S, 2% Fe**

% Organic Matter	40% OM
Bag Coverage	for 6,250 sq. ft. use 8 lbs/1000 for 12,500 sq. ft. use 4 lbs/1000
Medium Size	SGN 200

Clarus™ Pro Fortified Blends

Nutrients PLUS Fortified Blends for General Turf & Ornamental Areas

The Whole Shabang

Many experts agree greening from ammonium sulfate, particularly with organics, to be superior compared to other nitrogen sources. The Whole Shabang is different because organic bases are supplemented with it and also sulfate of potash.

6-2-4

**40% Slow Release Nitrogen
with 5% Ca, 4% S, 1% Fe**

% Organic Matter	50% OM
Bag Coverage	for 6,000 sq. ft. use 8.3 lbs/1000 for 10,000 sq. ft. use 5 lbs/1000
Medium Size	SGN 200

Super 8

Get the most out of your seedlings with 5-8-5 seed starter. New seedlings germinate more quickly in a phosphorus rich soil and now even more so when combined with an abundance of organic matter for increased microbial activity.

5-8-5

**50% Slow Release Nitrogen
with 2% Ca, 3% S, 1% Fe**

% Organic Matter	40% OM
Bag Coverage	for 6,250 sq. ft. use 8 lbs/1000 for 12,500 sq. ft. use 4 lbs/1000
Medium Size	SGN 200

A Quick Green That Lasts

A study demonstrated that only Nature Pure® provided the best color/quality ratings during the early weeks after treatment compared to Nature Safe® and Nutralene®. Additionally, Nature Pure® had the best residual ratings compare to urea.

Solutions For Organic,
Organic Growers & Farmers

Made from Nature Pure®

Nature Pure® is a process that preserves PURE sources of organic matter without the use of driers or heaters. Derived from 100% all-natural composted poultry manure, bioassays reveal an excellent biology ideal for optimizing a soil's biomass immediately upon application¹. Inoculants are not needed. Good microbes are bought to you naturally!

Nutrients PLUS™

Clarus 100™ | 100% Natural Fertilizers

Solutions For Organic,
Organic Growers & Farmers

Dynamic Duo

4-3-1 is an all purpose application ideal for delivering high volumes of 2 organic matter sources to the soil.

It contains Exceptional Quality Biosolids, created from the valuable 90% WIN (a mostly hot water insoluble nitrogen) and compost from the Nature Pure's 50% WIN (a mostly cold water insoluble nitrogen).

Plant feedings are then evenly distributed as quick, slow and season-long release. Moreover, 4-3-1 is teeming with stimulating soil life components. Certain microbes are attracted to Nature Pure organic compounds and others quickly colonize the biosolid for broad-spectrum soil biology that neither one alone provides.

4-3-1
